# Q-SYS QIO-GP8x8 (or GPIO on the Core)

THE GP8X8 IS A SINKING OUTPUT. IT CONTROLS THE NEGATIVE LINE OF A LOAD (AKA LIFT RELAY).

THE TOTAL CURRENT LIMIT OF EACH PIN ON THE GP8X8 IS 0.2A (200 mA) AT 12V DC.

EACH UP/DOWN RELAY ONLY CONSUMES 44mA (88mA TOTAL IF BOTH UP & DOWN BUTTONS WERE PUSHED SIMULTANEOUSLY).

CONFIGURE PIN-1 & PIN-2 AS OPEN COLLECTOR (200mA) CONTACTS IN THE QSYS DESIGNER SOFTWARE.

PRESSING UP & DOWN SIMULTANEOUSLY WILL NOT CAUSE ANY ISSUES. THE LIFT WILL ONLY OPERATE WHEN ONE RELAY IS ACTIVATED.

CONNECT RJ45 CABLE TO A1 OR A2 OF LIFT CONTROL BOX.

THESE PORTS ARE NOT POE PORTS.

LIFT CONTROL BOX

# Q-SYS QIO-LVR4

USING THE LVR4 WILL MAKE THE WIRING MORE TRADITIONAL. THIS IS A SOURCING CONFIGURATION.

EACH OUTPUT OF THE LVR4 WILL HANDLE 24VDC 2A.

PRESSING UP & DOWN SIMULTANEOUSLY WILL NOT CAUSE ANY ISSUES. THE LIFT WILL ONLY OPERATE WHEN ONLY ONE RELAY IS ACTIVATED.

CONNECT RJ45 CABLE TO A1 OR A2 OF LIFT CONTROL BOX.

THESE PORTS ARE NOT POE PORTS.

LIFT CONTROL BOX

# Q-SYS QIO-LVR4 (No Power Supply)

THIS IS CONFIGURATION CAN ELIMINATE THE NEED FOR CONTROL RELAYS WITH THE QSYS QIO-LVR4..

NO POWER SUPPLY IS NECESSARY. THE LVR4 WILL NEED TO BE LOCATED IN THE PULPIT CABINET WITH THE LIFT CONTROL BOX.

PRESSING UP & DOWN SIMULTANEOUSLY WILL NOT CAUSE ANY ISSUES. THE LIFT WILL ONLY OPERATE WHEN ONLY ONE RELAY IS ACTIVATED.
